

Astrocytes (Catalog No: HAST040):

Primary human astrocytes are immediately available for research. These cells express GFAP and do not differentiate into neuron like cells when plated on PLL coated plates in serum containing medium with growth factors and dibutyryl cAMP or NGF. The astrocyte cells are negative for MAP2ab (neuron marker). The astrocytes supplied by Clonexpress are guaranteed to grow for a minimum of 2 passages at a split ratio of 1:3.
