

Neuronal Progenitor Cell (Catalog No: HNPC010):

HNPCs are available immediately for research. These cells can be differentiated into mature neurons and they express a number of neuron specific markers. These cells form extensive processes and express MAP2 and β tubulin III. Cells can be left in the differentiation medium for 2-4 weeks with periodic change of medium (every fourth day) with appropriate differentiation promoting agent. HNPCs supplied by Clonexpress are guaranteed to grow for a minimum of 2 passages at a split ratio of 1:3.
